# Instructions for Completing the Excel Version of the Application Form for California Reading and Literacy Improvement and Public Library Construction and Renovation Bond Act of 2000 Funds

# TO BEGIN FILLING OUT THE APPLICATION, SELECT THE WORKSHEET TAB NAMED "APPLICATION" (Shown on the bottom-left of your screen, and to the right of the tab identified "INSTRUCTIONS")

- 1) When filling out this form, view it at 100% or higher. If viewing the document at less than 100% it will cut off some instructions. If page breaks do not match the Application Form in the regulations, beginning on page 30, adjust the top and bottom margins until they do. To adjust your top and bottom margins select "File", "Page Setup" and select the tab "Margins." Adjust the "top" and "bottom" margins (e.g., you may want to try one of these settings first: "top = 0.38" and "bottom = 0.4" or "top 0.58" and "bottom 0.52, etc.).
- 2) **To view page breaks**, on the toolbar select "Tools" then "Options", select the Tab named "View" and under "Window Options" select "Page Breaks"; OR select "View" and then "Page Break Preview".
- 3) To enter text in a narrative box, you must first press "Enter" when exiting the preceding field. This will allow you to point and click in the text box. Use this same technique when selecting an option button/box. With the exception of narrative boxes and option buttons, the tab key moves the cursor to the next space that will accept information.
- 4) Throughout this application "pop-up boxes" will appear giving special instructions. If any of these boxes are in the way, just "left-click" in the box and drag it to another location on your sheet.
- 5) The narrative box parameters are not what they seem. The boxes allow as many as two to six lines of text beyond what you see on your screen. To view the text that will appear in the narrative boxes, click out of the narrative box. To verify what will show, activate Print Preview by selecting the magnifying glass icon shown on the toolbar OR select "File" and then select "Print Preview".
- 6) If you wish to indent the first line of a new paragraph in a Narrative Box, hold down the Ctrl + Tab key. Pressing the tab key alone moves the cursor to another field.
- 7) Anywhere there is **a red** ">" indicates where information can be typed. Anywhere there is **a black** ">" is a place where Excel has a built-in formula and will automatically calculate. (Note, if it is not calculating, information has not been entered into the correct fields.)
- 8) In most cases where calculations are automatically done by the spreadsheet, numbers will be rounded to the nearest whole number automatically Examples of some exceptions are:
  - Page 12 #10. SF of Parking / 1 SF of Building allows two decimal places
  - Page 23 #2 B. Co. Locality Adjustment Factor allows two decimal places
  - Page 23 #4 B. Inflation Factor allows 3 decimal places
  - Page 24 #11 B. Inflation Factor allows 3 decimal places

In most fields where the user enters numbers manually, the form will not accept decimals. Entering a decimal in these cases will result in an error message.

<sup>&</sup>lt;sup>1</sup> "Common Areas" are those areas of a multi-occupant building that are shared by all occupants, such as lobbies, vestibules, mechanical rooms, restrooms, custodial areas, delivery, shipping and receiving areas, loading docks, kitchenettes, auditoriums, meeting rooms, conference rooms, and storage areas that are used by all parties of a multipurpose building.

# PROJECT PLANNING INFORMATION

# **Population Growth**

When providing the 1980, 2000, and 2020 population figures below, the applicant shall count only those residents:

- (a) Within the official boundaries of the applicant jurisdiction, and
- (b) Within the service area of the proposed project, but
- (c) Exclude all people living within the boundaries of other special district, county, or city public library service areas, for which there is no public library service contract with the applicant.

#### Existing School Library: (Co-located Projects Only)

2. The current gross square footage of the existing school library(s) being replaced is:

> SF

If no existing school library facility, enter "0."

### Library Facilities Master Plan

Describe the relationship of the proposed project to other existing or planned library facilities for the jurisdiction.

In the year 2000, a Library Facilities Committee was created to review all Siskiyou County branch libraries. They compared the buildings based on size, condition, location, accessibility, proximity to schools, community interest, populations served, and current and potential use. The members of the Committee visited and evaluated each branch library that might potentially be replaced. The Mt. Shasta and Etna libraries were not visited because they were built recently and were deemed adequate in size, location and accessibility. The McCloud Library was not included because community members indicated they were not interested in considering a library project in the near future, and the Montague Library was in the process of moving into a renovated room in City Hall. The Dorris, Tulelake, Weed, and Ft. Jones libraries were determined by the Committee to be inadequate and in need of replacement.

The Library Facilities Committee presented their final plan to the Siskiyou County Board of Supervisors in February, 2002. This was the basic conclusion, taken from that report: "... Dorris, Happy Camp and Tulelake libraries are the most inadequate branch libraries. Dorris and Happy Camp libraries are very small and in poor condition. Happy Camp is also in a poor location. Tulelake library is downtown and larger than the other two, but the building is in poor condition. All three libraries lack parking, seating space, adequate shelving, areas for children's or adult programs, and accessible rest rooms.

"... The Committee advised the County to support efforts made by the communities of Dorris, Tulelake and Happy Camp to replace their current libraries. The Committee agrees that Dorris is most likely to be able to apply for California Library Bond Act grants by the first deadline, which is June 14, 2002, because that community has identified sources of funding for at least portions of the required 35% local match. The community will need to raise approximately \$200,000, including the value of donated property. If the communities of Dorris, Tulelake and Happy Camp are unable to secure funding, find land, and complete the necessary grant applications by June 14, 2002, the committee encourages them to apply for grants in the second Bond Act cycle."

The Board of Supervisors accepted the report of the Committee and concurred with its findings. The tradition in Siskiyou County has been for the county to operate library branches in facilities provided by local jurisdictions. The only current exceptions to this situation are in Yreka, where the library headquarters are in a county owned building, and Weed, where the library is in space rented by the County. Because cities and local districts take responsibility for providing facilities, the County can encourage improvements and building replacements, but cannot dicate them or plan for them.

The City of Dorris has provided a building for the Dorris library since 1915, and plans to continue in this tradition by building a new library facility.

# Site Use Potential

#### Accessibility

Describe the accessibility of the proposed site for the residents in the library service area:

#### **Equal Access**

Discuss the site's accessibility to all parts of the library service area and its location in relationship to the geographic center of the library service area. Discuss any natural and artificial barriers that may impede access to the site.

Dorris is the major community in the Butte Valley Service Area, and the only incorporated city. It is in the northeast corner of the Butte Valley area. Over one third of the residents of the Butte Valley area live in or near Dorris. The elementary school and high school that serve Butte Valley are located in Dorris. The library will be located six blocks from Highway 97, the major highway that connects residents of Butte Valley to the I-5 corridor to the west and to Eastern Oregon to the north.

Within the community of Dorris, residents live within walking distance of the new library site. Other Butte Valley residents will need to drive to the library. For those who live in Tennant, Macdoel and Mt. Hebron, Dorris is on their routes from home to Klamath Falls, Oregon, which is the major shopping area for many of them. If they choose to shop in Redding or Yreka, then Dorris is 10 miles in the opposite direction, but they would have access to library branches in other communities that they would drive through.

Transportation and distances are frequently barriers to service in Siskiyou County, which covers over 6000 square miles but has a population of less than 45,000. Snow storms can occasionally be a barrier to travel in Butte Valley.

#### **Public Transit Access**

✓ Number of public transit stops located within 1/4 mile of site: >

If public transit is available in the library service area, describe the various public transit access opportunities for the site. If no public transit is available in the library service area, enter "No Public Transit Service."

Dorris does not have public transit. The City does, however, offer a van that can be used for transportation for seniors or people with disabilities, provided they can provide an insured driver. After the new library is built, the Butte Valley Friends of the Library hope to launch a volunteer project that will involve drivers who provide transportation to the library on scheduled days for those who need it. The Plan of Service does not include this potential project because it is dependent on factors that cannot be assured at this point. This project cannot be implemented for the current library for two reasons. Only one or two people can comfortably use the library at the same time, so group transportation is not feasible. Also, people with disabilities cannot use the library's tiny rest room. They therefore cannot be left at the library without immediate transportation home.

#### Pedestrian & Bicycle Access

Describe other access opportunities such as pedestrian walkways and bicycle paths. Discuss plans for amount and location of bicycle parking, including local ordinance requirements.

The City of Dorris does not have an ordinance for bicycle parking. The library will begin with parking for ten bicycles in a rack in front of the library, and increase that number if necessary.

The library will have a sidewalk leading from the parking lot to the Library Entrance, and one leading to the side entrance that goes to the Multipurpose Room, kitchenette, staff workroom and storage room.

Sidewalks will lead from the library to Triangle street and Third Street. Children from the Elementary School and the High School will be able to walk from school to the library on sidewalks without crossing a street, except the extension of Third Street that only serves the library. Children from the Montessori Preschool will be able to walk to the library on sidewalks, and will need to cross Triangle and one other side street.

#### **Automobile Access**

Describe the site's accessibility by automobile for residents of the library service area. Take into consideration traffic, traffic systems, and availability of curb cuts.

The library will be located at the west end of Third Street, which is one of the town's two major business streets. It includes the post office, the high school, the elementary school, the Montessori preschool center and the clinic.

Dorris does not have traffic problems, except that traffic on Highway 97 can become congested in bad weather. The majority of Dorris residents live on the west side of 97, where the library will be located.

Some residents of Butte Valley may drive 30 miles or more to obtain services, including library services. They live in very remote areas where the sparse population precludes convenient access. This barrier could only be overcome with a books by mail service, since even a bookmobile would not be a practical way to serve such a scattered population.

#### Proximity to Major Thoroughfares

List the major arterial routes in the library service area with the most recent traffic counts (number of vehicles per day):

|      |  | Number of        |              |             |
|------|--|------------------|--------------|-------------|
|      |  | Blocks           | Traffic      | Count       |
|      | Street Name                                | <u>from Site</u> | <u>Count</u> | <u>Date</u> |
| 1. > | Highway 97                                 | 7                | 4,350        |             |
| 2. > | (annual average daily count from CALTRANS) |                  |              |             |
| 3. > |  |                  |              |             |
| 4. > |  |                  |              |             |

# Library Automobile Parking 1. Number of library parking spaces available off street, on library site...... 10 spaces 2. Number of library parking spaces available off street, off library site...... (within 500 feet of front door) 3. Number of parking spaces available on street..... 4 spaces (within 500 feet of front door) 4. Total Number of Spaces Available for Library Parking..... Zoning Requirements 5. Number of on-site library parking spaces required by local zoning..... > 10 spaces > Yes O No • 6. Was a zoning variance or waiver obtained for the project for parking?..... 7. If so, by how many spaces were the parking requirements reduced?..... 8. Provide number of square feet per parking space as required by local zoning....... 9. If no local zoning requirement, provide the average number of square feet per parking space used in the project calculations..... SF Automobile Parking to Building Square Footage Ratio # of Square Feet of Parking > \_\_\_\_\_\_ 4,242\_ SF = 1.29 SF of Parking / 1 SF of Building 10. Calculate: # of Square Feet of Building > 3,300 SF # of Square Feet of Parking 15.000 SF Example: 1.50 SF of Parking / 1 SF of Building # of Square Feet of Building 10,000 SF Library Bicycle Parking 11. Total Number of Spaces Available for on-site Library Bicycle Parking...... 10 spaces

#### Parking Rationale

Describe the rationale behind the amount of parking that will be available for the project, including: (1) the location of the automobile parking (on-site or off-site), both within and beyond 500 feet of the library entrance; (2) local zoning requirements; (3) the availability of public transportation; (4) bicycle parking and bicycle and pedestrian paths; and (5) any other considerations impacting automobile parking requirements including, but not limited to, parking partnerships with shared use agreements.

The library will have ten parking spaces located in front of the building, plus an undeveloped area that can be overflow parking for four cars. One space will be for people with disabilities. Street parking will also be available on Third and Triangle Streets.

The local ordinance for parking requires "One parking space for each six seats in theatres, restaurants, bars and all public assembly places." (Dorris City Ordinance, Section 4.1 C-1 Zone Light Commercial). The Library Multipurpose Room can provide seating for up to 30 people, and the main part of the library will have 27 readers seats. The nine designated parking spaces plus street parking will meet the City's ordinance.

The City of Dorris has few sidewalks, but Third Street is an exception. Sidewalks on both sides of Third Street will provide safe pedestrian access to the new library. Children from the local preschool and children from the elementary and high schools will have sidewalks to use in going from their schools to the library.

Bicycle parking will be available beside the front entrance of the library. Th einstalled bicycle rack will accommodate ten bicycles, and more bicycle parking will be provided if needed.

| THE CIL               | y di Ddilia ddea lid | t curreritiy mave | public transportation. |

#### Visibility

Describe how visible and prominent the public library building will be within the library service area.

The library will be located at the end of the community's busiest street. It will be visible from the post office, bank, schools, etc. This will make it highly visible to residents of Dorris, but also all Butte Valley residents with children who attend school in Dorris, and to visitors who come to the community for almost any reason. Because the library will have no buildings located north, south or west of it, it will be quite prominent.

#### Community Context & Planning

Describe the proximity of the proposed site to other facilities and areas of the community, and how that proximity enhances the use of the library by the residents in the library service area. Describe the appropriateness of the proposed site including whether the proposed library project will contribute to the establishment, redevelopment, or revitalization of a community or downtown core, business district, or neighborhood. Describe how the proposed library is connected to other uses, including public use facilities, by a full range of transportation and pedestrian options.

Community life in Dorris centers on the schools, the preschool, the clinic and City Hall. The Library will be located within two blocks of the schools and three from the clinic. This makes the site very appropriate. In addition, if Dorris experiences population growth, it is likely to occur on the west edge of town, where the library will be located. Area residents place a high priority on having a public library that serves the needs of students, and they favor this location because students can easily go to the library after school.

For Butte Valley residents who do not live in Dorris, the site of the new library should also work well. It is at the west end of the town's primary business street, so it will be visible and easy to drive to. They will also see the library when they attend school functions.

Other sites considered for the library were on Highway 97. At a community meeting in April, 2002, those who attended were nearly unanimous in their preference for a site that would not be subject to the traffic noise and hazards of the highway. The site of the current library was also discussed. It is further away from the schools than the proposed site, on a street with no sidewalks. The site is also not large enough to provide adequate parking. This was rejected.

#### Site Selection Process

Describe the site selection process including community and planning department involvement, consultant assistance, as well as any other pertinent activities associated with determining the best site for the library project.

Dorris is a very small community that has businesses and community services clustered along only two streets. One is Highway 97, and the other is Third Street. After reading articles in the Klamath Falls newspaper concerning the Butte Valley Friends of the Library efforts to build a new library, Bob Edgar, the owner of California Oregon Telecommunications, offered to donate the property adjacent to the phone company as a library site. He did this while the Siskiyou County Library Facilities Committee was meeting to prioritize library building needs in the county. The Committee members agreed that his site is appropriate because it is close to the Butte Valley Elementary School, the Butte Valley High School, the Montessori Children's House and the Butte Valley Health and Dental Center. It is also at the end of the town's busiest street, and very visible.

At one point, the Dorris City Council delayed a vote for a use permit for the property. This caused people of the community to hold a community meeting, which 28 people attended. Over 50 attended the next City Council meeting. Support for the library site was nearly unanimous. One person, a retired school superintendent, said she owned property on Highway 97 which she would donate if she thought it would be the better site, but she preferred Mr. Edgar's property. Attendees at the meeting agreed that up to 90 percent of the residents of Dorris live on the west side of Highway 97, and they want the library on that side so their children do not need to cross, or go next to, the highway. The City Council was persuaded and voted to apply for grants to build a new library

#### Site Selection Summary

Describe why the proposed site was selected and why it is the best available location for the proposed public library project. If there are problems with the proposed site, are there mitigating circumstances that lessen the negative impact of the problem or problems? Describe any proposed design solutions that may moderate the site's drawbacks.

The site for the new library was chosen because it is donated property that is also in a totally appropriate location, close to schools and community services. The library will be prominent because it will have no other buildings on any side of it. This will also provide opportunities for expansion of the library to the west, and addition of other community buildings to the west or the north.

In one sense, a library located between the schools and the Dorris business area might be preferable, but the difference is only a matter of four blocks. Also, the library could not have the unobstructed view of Mt. Shasta that will be so important to the ambience of the building if it were located further east.

For Butte Valley residents and tourists, a library site on Highway 97 would be more visible. Signs directing them to the library will be posted, of course. Also, the Dorris City Hall, which is in a stone building with historic status, is on Highway 97. When people stop there for information, they will be directed to the library as needed.

The City Council showed a little concern about traffic on Triangle Street, which is the side street next to the library site. They voted to have the entrance to the library parking lot come from an extension of Third Street in order to minimize any negative impact on the neighborhood.

The library site is a basically flat field that is the valley floor. Flooding is unlikely, but has to be considered. The library will be built on compacted soil and rock fill that raises it above the surrounding ground. Drainage will be carefully planned.

No other building site that is located so close to the Butte Valley Elementary and High Schools could provide the opportunity that the selected site does to build a library that provides stunning views and a sense of space and openness.

# **Site Description**

#### Size

The total square footage of the library site should equal the square footage shown in 1 through 8 below:

| All Pi | Square Footage  |   |           |
|--------|---|---|-----------|
| 1.     | Proposed Library Building Footprint <sup>1</sup>          | > | 3,300 SF  |
| 2.     | Proposed Library Surface Parking Lot                      | > | 7,363 SF  |
| 3.     | Proposed Library Parking Structure Footprint <sup>1</sup> | > | SF        |
| 4.     | Future Library Building Expansion Footprint <sup>1</sup>  | > | 1,250 SF  |

#### **Energy Conservation**

Describe what measures (include building design, solar orientation, materials, mechanical systems, natural ambient lighting, etc.) are planned to reduce energy consumption and operating costs for the library.

Energy conservation will be addressed in the new library by the following means:

Use of abundant natural light.

Automatic lighting system that provides light only when necessary

Zoned lighting, heating and air conditioning, so the Multipurpose Room will not be lighted, heated or cooled when it is not in use, and vice versa.

Effective use of insulation

A combination of insulating windows and window coverings to reduce heat loss

A tile floor in the Library Entrance that can absorb heat in cooler months

Walls on the north side of the buildling will be limited in size to minimize heat loss

Automatic thermostats to guard against unnecessary heating or cooling

Motion detectors in restrooms to provide lighting only as needed

Protected thermostats in the Multipurpose Room to prevent unauthorized temperature changes

Overhangs on the south side of the building will reduce heat in the summer

#### Geotechnical Report

Identify and summarize any special geologic conditions, including, but not limited to, compressible and expansive soils, tunnels and mine shafts, unstable slopes, active seismic zones, excessive ground water and areas prone to liquefaction. Indicate if these conditions will prevent the use or significantly increase the cost of developing the site for a public library building.

The following statements were taken from the Geotechnical Report provided by Krazan and Associates.

The upper soils within the project site ar moisture sensitive and moderately compressible under saturated conditions. Mitigation measures are recommended to reduce potential soil settlement. It is recommended that at least 2 feet below the base of the footings be excavated, moisture conditioned as necessary, and repacked. Within the proposed building slab system, exterior flatwork, and pavement areas, it is recommended that the upper 12 inches of native soil be excavated/scarified and recompacted. With the exception of the upper moisture sensitive soils and fill material, the subject site and soil conditions appear to be conducive to the devleopment of the project.

It is not anticipated that groundwater will rise within the zone of structural influence or affect the construction of foundations and pavement for the project.

The potential for soil liquefaction is very low. Therefore, no mitigation measures are necessary.

Any loose fill materials at the site could be vunerable to seismic settlement. However, this hazard can be mitigated by following the design and construction recommendations of our Geotechnical Engineering Investigation (over-excavation and rework of the loose soils and/or fill. The native deposits underlying the site do not appear to be subject to seismic settlement.

The organic-free, on-site, upper native and fill soils are predominately silty sands, sandy silts and sandy silts with a trace of clay. These soils will be suitable for re-use as Engineered Fill, provided they are cleansed of excessive organics and debris.

The Geotechnical Report results will not prevent use of the planned site for the library, nor significantly increase building costs.

# FINANCIAL INFORMATION

### Normal Public Construction Costs in the Applicant's Area

For projects with new construction only (i.e., constructing a totally new library building or the expansion to an existing building)

#### Construction Cost Index Approach:

To justify the eligible projected construction cost estimate for new construction, applicants shall complete the following:

1) January 2002 current costs per square foot:

A. For new facilities:

[Example:

\$202 /SF

B. For square footage added to an existing building, i.e. "expansions":

\$238 /SF

Multiply the appropriate County Locality adjustment Factor (2B) by the appropriate new cost per square foot figure (2C) (See section 20436 (c) (1) to obtain the "Locally Adjusted Construction Cost per Square Foot" figure (2D):

County Locality
2)A. County: > Siskiyou B. Adjustment Factor:>

Appropriate
C. New Cost/SF:>

\$ 202 /SF = D. > \$ 198 /SF

Name of Project County

Solano

1.07

0.98

(Select: 1A or 1B) \$ 202

\$ 216 /SF]

3) A. Locally Adjusted Construction Cost Per Square Foot:

\$ 198 /SF (Re-enter Line 2D)

The "Locally Adjusted Construction Cost per Square Foot" (3A) figure may be increased by 1/5 percent per month for each month from January 1, 2002, through to the estimated mid-point of construction of the project.

Multiply the number of months (4A) times .002 (1/5%) to get an inflation factor (4B). Multiply the inflation factor (4B) times the "Locally adjusted Construction Cost per Square Foot" figure (4C) to get an "Additional Cost per Square Foot" figure (4D)

Number Inflation Locally Adjusted Additional \$/SF C. Construction \$/SF: > A. of Months:> B. Factor: > 198 D. > 28 X .002 = .056 Χ /SF = \$ 11 /SF (1/5%)(Re-enter 3A) [Example 14 X .002 = 216 /SF =

Add the resulting "Additional Cost per Square Foot" figure (5A) to the "Locally Adjusted Construction Cost per Square Foot" figure (5B) to get the "Eligible Projected Construction Cost per Square Foot" figure (5C):

Additional Locally Adjusted Eligible Projected

A. Cost/SF:  $\Rightarrow$  11 /SF + B. Construction \$/SF:  $\Rightarrow$  198 /SF = C. Construction \$/SF:  $\Rightarrow$  209 /SF

[Example \$ 6 /SF + \$ 216 /SF = \$ 222 /SF]

The total "Eligible Projected Construction Cost" for the project is calculated by multiplying the "Eligible Projected Construction Cost per Square Foot" figure (5C) by the total number of square feet of new construction:

6) The Eligible Projected Construction \$/SF:

> \$ 209 /S

7) The Square Footage of New Construction:

Multiplied By

> 3,300 SF

Equals

\$ \$ 400 700

8) The Eligible Projected Construction Cost:

> \$ 689,700

If the projected construction cost estimated by the project architect is lower than the figure in Line 8, the applicant shall use the lower figure as the normal public construction cost in the applicant's area.

A 10% project contingency amount is allowed and is calculated by multiplying the total Eligible Projected Construction Cost by 10%:

9) Eligible Contingency: (10% of Line 8)

> \$ 68,970

# Comparable Public Construction Approach:

As an alternate to the Construction Cost Index approach to estimating normal construction costs in the applicant's area, the applicant may employ a local public construction cost comparison approach to calculate the Eligible Projected Construction Cost figure. [See section 20436 (c) (3)]. List a minimum of three comparable public construction projects that have been bid within the applicant's County within three years of the Board's deadline for application.

Comparable public construction projects are public libraries, community colleges, post offices, museums, courthouses, city halls, auditoriums, convention centers, civic centers, senior citizens centers, public schools, and recreation centers.

The costs listed shall be for construction of the building only and exclusive of any site acquisition, demolition, development, utilities, or landscaping; surface and under building parking; works of art; shelving; furniture; built-in service desks, counters, workstations, or other casework; movable equipment; or architectural and engineering fees.

|             | <u>Project</u> |                   |                   |        | Constru<br><u>Cost/</u>          |          | Example:   |
|-------------|----------------|-------------------|-------------------|--------|----------------------------------|----------|------------|
| A. >        |                |                   |                   |        | \$                               | /SF      | \$ 230 /SF |
| B. >        |                |                   |                   |        | \$                               | /SF      | \$ 210 /SF |
| C. >        |                |                   |                   |        | \$                               | /SF      | \$ 220 /SF |
| D. >        |                |                   |                   |        | \$                               | /SF      | /SF        |
| E. TOTAL    |                |                   |                   |        | > \$                             | /SF      | \$ 660 /SF |
| 10) Locally | Determined Cor | mparable Cost per | Square Foot (\$/5 | SF): < |                                  |          |            |
| > \$        | /SF            | Divided by >      |                   | =      | > \$                             | 0 /SF    |            |
| Re-e        | nter Line E    |                   | # of Projects     | •      | Locally Determine<br>Cost per Sq | •        |            |
| [Example    | \$ 660 /SF     | Divided By        | 3                 | =      | \$                               | 220 /SF] |            |

The "Locally Determined Comparable Cost per Square Foot" (10) figure may be increased by 1/5 percent per month for each month from January 1, 2002, through to the estimated mid-point of construction of the project.

Multiply the number of Months (11A) times .002 (1/5%) to get an inflation factor (11B). Multiply the inflation factor (11B) times the "Locally Determined Comparable Cost per Square Foot" figure (11C) to get the "Additional Cost per Square Foot" figure (11D):

| 11) | Number A. of Months: | > | X .002 =    | Inflation<br>B. Factor: > |      | Locally Determine<br>X C. Comparable \$/SI |  |       | 0        | /SF = D. > | \$<br>/SF    |
|-----|----------------------|---|-------------|---------------------------|------|--|--|-------|----------|------------|--------------|
|     |                      |   | (1/5%)      |                           |      |  |  | (Re-e | nter 10) | •          |              |
|     | [Example             |   | 14 X .002 = |                           | .028 | Χ  |  | \$    | 220      | /SF =      | \$<br>6 /SF] |
|     |                      |   |             |                           |      |  |  |       |          |            |              |

Adding the resulting "Additional Cost per Square Foot" figure (12A) to the "Locally Determined Construction Cost per Square Foot" figure (12B) gives the "Eligible Projected Construction Cost per Square Foot" figure (12C):

|     | Additional    |           |         | Locally Determined       |        |         |            | Eligible Projected       |           |      |
|-----|---------------|-----------|---------|--------------------------|--------|---------|------------|--------------------------|-----------|------|
| 12) | A. Cost/SF: > | \$        | /SF +   | B. Construction \$/SF: > | (      | )       | /SF =      | C. Construction \$/SF: > | \$        | /SF  |
|     |               | (Re-enter | 11D)    |                          | (Re-en | iter 11 | <u>C</u> ) |                          |           |      |
|     | [Example      | \$        | 6 /SF + |                          | \$     | 220     | /SF =      |                          | \$<br>226 | /SF] |

The "Eligible Projected Construction Cost" is calculated by multiplying the "Eligible Projected Construction Cost per Square Foot" figure (12C) times the square footage of new construction:

13) The Eligible Projected Construction \$/SF: 

Multiplied By

14) The Square Footage of New Construction: 

Equals

15) The Eligible Projected Construction Cost: 

> \$ /SI /(Re-enter 12C)

SF

If the projected construction cost estimated by the project architect is lower than the figure in Line 15, the applicant shall use the lower figure as the normal public construction cost in the applicant's area.

A 10% project contingency amount is allowed and is calculated by multiplying the total Eligible Projected Construction Cost by 10%:

16) Eligible Contingency: (10% of Line 15) > \$

#### Financial Capacity (New Construction and Conversion Projects Only)

Applicants with new public library projects shall describe their financial capacity to open and maintain operation of the proposed library including anticipated revenue sources for library operations support.

The Butte Valley area and the City of Dorris are economically disadvantaged even in comparison to Siskiyou County, which is disadvantaged in comparison to the rest of the state. Maintaining a library facility and providing library services will be a financial struggle for both the City and the County. This has been true since a library was established in Dorris in 1915, and yet a facility and services have been provided without interruption since then. The City Council and County Board of Supervisors have committed to continuing to provide a library to the people of Butte Valley, and they will make funds available in their budgets to support the library.

It is partially because the Butte Valley area struggles financially that this grant for a new library is so crucial. The new library absolutely could not be built without grants. For Butte Valley, this grant is a major opportunity. Even though it comes at a time of great uncertainty, due to the state of the economy, the Dorris City Council and the County Board of Supervisors support the project and are willing to commit to it. They know that if this opportunity is lost there may not be another one that will provide any new community services, including a library, for some time to come. And they realize that the current library building is totally inadequate. It barely provides a place for their residents to check out books and use a computer, and does not provide any useful spaces for working on homework, reading a newspaper, sharing a book with a child or even browsing the library's collection undisturbed.

The Butte Valley area desperately needs a new library that is welcoming to people, that actively encourages reading, literacy improvement, lifelong education, library use, and programs.

# PROJECT TIMETABLE

| Provide the timetable for the proposed project.   |     |             |  |  |  |
